

Johan Sveningsson

Senior Frontend developer

My journey in the IT world has equipped me with the ability to quickly adapt to different projects and work environments, making me a reliable partner for your company. Driven and motivated, I am always ready to tackle challenges and find creative solutions to exceed your expectations.

As a frontend specialist, I have extensive experience building scalable and responsive applications that are easy to maintain and update. I also have a strong background in integrating React with other technologies and frameworks to create comprehensive solutions tailored to your needs.

Roles:

Frontend Developer
Fullstack Developer

Years of experience:

6-10 years

Education & Certifications:

Halmstad högskola

Aug 2012 - Jun 2015

A Bachelor's degree in informatics with a focus on web development is a degree that provides students with broad and in-depth knowledge in the field of web programming and development. This degree is ideal for students who want to specialize in web design and web development, and who want to take their careers in this field to the next level.

Languages:

English ●●●●●
Swedish ●●●●●

handles in-store.

Technologies:

Experience with Jest, Webpack, Redux, React, and Rollup.

Regional business developer & Senior Frontend Developer

Forefront Consulting Group AB, Apr 2018 - Ongoing (4 years, 12 months)

As a regional business developer, I have had a diverse and responsible role. In addition to leading and driving our regional office, I have worked with both sales and recruitment. Developing and maintaining customer relationships has been a central part of my work, and I have had the opportunity to act as a consultant for several of Forefront's clients.

As a consultant, I have worked closely with clients to understand their specific needs and desires. By immersing myself in their business and industry, I have been able to provide valuable insights and advice. Being able to support and help clients has been a major driving force in my work.

Combining my duties as a business developer and consultant has been a challenge, but also an opportunity to develop and utilize a broad skill set. Working in such a role has required the ability to be flexible, adaptable, and highly independent.

Through my work as a regional business developer and consultant, I have gained unique insight into what it takes to run a successful business and how to help clients achieve their goals. This has given me invaluable experience and knowledge that I can bring to future challenges and assignments.

Frontend developer.

Tradera, Sep 2020 - Aug 2021 (12 months)

As part of this project, we have developed an innovative service for Tradera's larger customers that allows them to upload and manage multiple ads simultaneously. The service is particularly useful for companies and larger organizations looking to streamline their ad management on Tradera.

With our service, users can easily upload multiple ads at once, saving time and reducing the risk of errors. The service also enables the management of multiple ads simultaneously, which is a significant advantage for users with many ads running concurrently.

To further increase efficiency, users can also create lists for their ads. The lists make it possible to organize ads according to various criteria, such as product type or target audience, making it easier to keep track of the ads and see which ones perform best.

Technologies:

REST, Jest, TypeScript, Redux, and React

Techlead

2Secure, 2020 - Sep 2020

2Secure has developed a portal to facilitate the process of background checks. The task was to build a portal that enables the retrieval of data for individuals, for instance, those involved in a recruitment process.

The data is summarized in a final report. The individual who has undergone a background check can then log in and review the results, accept the check, chat with 2Secure, or cancel the check.

When implementing the portal, it was important to consider GDPR regulations and not perform any type of check before the individual has given their consent to carry out the check.

Technologies:

Experience with TypeScript, React, Vanilla JS, ECMA Script 6, Redux, HTML, and CSS

Frontend developer

STARTKRAFT, 2019 - Feb 2020 (1 year)

In this project, we were tasked with redesigning their existing website and building a new website from scratch. We created two portals, one for participants and one for advisors.

In the participant portal, users can create a unique CV using different templates, create activities, and receive meeting bookings that are synced from the Dynamics business system. We also developed a chat feature, which allows participants to chat with their advisors.

Technologies:

Experience with Unit Test, Architecture, TypeScript, Redux, Sockets, React, and Fetch

Developer

TRYGGKREDIT, May 2019 - 2020

Tryggkredit needed assistance in developing a new API. The API is intended for use in their mobile application, as well as by other companies that may want to retrieve relevant data through the API.

Technologies:

Experience with HTML, JavaScript, PHP, CSS, and Symfony

Developer

FOFILL, Nov 2018 - Mar 2019 (5 months)

In this project, a completely new website was built using WordPress. The goal was to create a unique website that is easy to update with content and aligns with their brand's appeal.

Technologies:

Wordpress, php

VD & ägare

Dobus AB, Mar 2015 - 2019 (3 years)

I am the founder and owner of Dobus AB, a digital agency based in

Halland that has worked with a variety of local clients. Among our customers were large companies like Weland and smaller businesses like Halmstad Kylteknik. Our services included everything from websites to mobile apps, and we always aimed to deliver high-quality solutions that met our clients' needs and wishes.

During my time at Dobus, we had five highly qualified and engaged employees. Together, we created a work environment characterized by creativity, collaboration, and innovation. By working closely with our clients, we could create tailored solutions that met their unique needs and were adapted to their budget.

Running my own digital agency has been a significant challenge, but also a fantastic opportunity to develop and grow as an entrepreneur. Having the opportunity to work with a variety of clients and projects has been an important part of my experience and has taught me the importance of having a high degree of flexibility and adaptability.

I am proud of what we have accomplished at Dobus, and I am confident that the knowledge and experience I have gained will be valuable in my future career.

Frontend developer

REWELL MEDICAL AB, Aug 2018 - Nov 2018 (4 months)

Worked on a React JS application for a company aiming to develop a new way of reaching patients with low testosterone levels. Implemented a flow where a patient can get in touch with a doctor and evaluate whether they require testosterone treatment.

Technologies:

Experience with HTML, JavaScript, SCSS, Architecture, and React.

frontend developer

BONAVA, 2017 - Jul 2018 (1 year)

Developed Bonava's new external website as part of the frontend team, which was launched during the project. The task was to work closely with the client to develop Bonava's new website. Viktor's main responsibilities included managing the maps and working on EPI-related aspects of the project.

Technologies:

Experience with JavaScript, SCSS, Webpack, and React

Project Manager Developer

Weland, Oct 2017 - May 2018 (8 months)

Weland AB is a stable family business with a factory and headquarters in Smålandsstenar. They are a leading manufacturer and supplier of spiral stairs, straight stairs, railings, handicap ramps, walkways, grating, and mezzanines. Weland is also one of Sweden's largest players in the field of sheet metal processing. Weland has 32 subsidiaries, and all these companies need new IT services on an ongoing basis.

We are developing new IT services for Weland that their customers can use, for example, to create quotes. One of the projects we have

developed for Weland is a drawing tool for building a fence with the right measurements and components. The customer drags the component they want into a grid and can then assemble their fence. If certain components cannot be placed next to each other, the customer cannot drop the component next to it, but instead must choose a component that goes together with the one they have already released.

Technologies:

Experience with HTML, JavaScript, SCSS, Redux, and React

Developer

HALMSTAD KYLTEKNIK, Apr 2017 - Dec 2017 (9 months)

AB Halmstad Kylteknik provides cooling equipment to various companies in the Halland region. The owner and CEO identified a problem with the external communication between the company's technicians and their customers when, for example, a cooler malfunctions. This raised the question: what would an efficient reporting of faults look like? We took on the challenge with open arms and developed an app with the goal of facilitating service cases.

What we developed was an iOS application, Android application, and a website for administering the applications. The purpose was for the customer to be able to make fault reports to Halmstad Kylteknik through a simple interface. Halmstad Kylteknik can then follow the case through the web interface and set the status of the case. The customer receives a notification in their application every time a status changes.

Technologies:

Used JavaScript, Swift, SCSS, Laravel, VueJS, and Vue.js.

App developer

ARBETSFÖRMEDLINGEN, Sep 2017 - Nov 2017 (3 months)

Arbetsförmedlingen was in a position where they wanted to reach their visitors in a smooth way during the fair and for visitors to be able to read about the companies exhibiting at the fair. What we developed was a mobile application that allowed visitors to receive news and updates directly on their mobile phones, as well as the ability to search for interesting companies exhibiting at the fair and see what jobs they have to offer. Through the application, visitors could also see where the company was exhibiting in the venue. An admin interface was developed where Arbetsförmedlingen could manage, send notifications, and add exhibitors. The application was built using React Native, which allowed the same codebase to be used for development on two different platforms, iOS and Android.

Technologies:

Used React Native to develop a codebase that worked for both iOS and Android

Developer

SAS, Sep 2017 - Oct 2017 (2 months)

The task was to analyze their current codebase and identify opportunities for improvement, review the structure of how the current code is organized, and evaluate the quality of the codebase in the

project. Johan provided an overview of their current system and summarized shortcomings in a document that SAS could use as a basis for improvement opportunities.

Technologies:

Used AngularJS, Jest, Angular 5, and architecture

Frontend architect

TRYGGHETS RÅDET, Jul 2017 - Aug 2017 (2 months)

Trygghetsrådet needed to develop a new portal for managing applications. Johan developed an architecture for their new project using ReactJS. Johan created a folder structure and included the necessary packages to ensure a consistent workflow. A standard was set to be followed throughout the development process.

Technologies:

Used SCSS, Jest, Webpack, Redux, React, and architecture.

App developer, backend developer, frontend developer.

BENDT BIL, Apr 2017 - Aug 2017 (5 months)

Bendt Bil, the Halmstad-based company with a heart for brands such as BMW, MINI, Hyundai, Opel, and Izusu, felt that it was time to digitize parts of their business in order to streamline it. Trade-in protocols were handled through paper forms, it was difficult to locate all cars in the parking lot, cars were sent out for test drives without any real control over the test drivers, and there was also a certain risk of car theft. We were hired to create a simple solution that provides added value for both Bendt Bil's staff and customers!

We developed an iOS application, Android application, and a web interface for Bendt Bil.

When a salesperson, for example, scans a customer's driver's license for a test drive, we validate if it is genuine or not using OCR technology. If the driver's license is genuine, the registration number of the car is written down, and the car is registered for a test drive. This can be tracked in a web interface and can be managed there.

Relevant data can be obtained through the web interface, such as how many times a car has been test-driven and who the test drivers are.

They also invite users who have the rights to log in to the app.

Technologies:

Used iOS, Swift, SCSS, Laravel, CocoaPods, Webpack, and Redux, React

Frontend developer

RIDDERMARK BIL, 2016 - Dec 2016

In this project, a dashboard was developed to display all the used cars that were in stock. Using connections with Blocket and other services, the dashboard allowed for easy evaluation of the value of each car, which was then automatically sent to the customer via SMS.

Technologies:

Used ReactJS and Redux.
